

Project Vision

Jagiellonian University in Krakow

Software Requirements Specification

Kinga Żmuda

Dominik Szymczyk

Martyna Cios

Piotr Szulej

Wojciech Popiel

Krakow 16.06.2025

1. Business Requirements

2. Threat and Risk Analysis

3. Context

1. Business Requirements

- Ability to create user accounts
- Integration of services such as recruitment history, CV builder, articles, calendar, and notes to encourage potential users to adopt our application
- Possibility of monetization through advertisements
- Providing opportunities for further application development, e.g., more CV templates or new articles
- Securing the database through backup strategies
- A working demo by 10.06.2025
- A fully functioning application by 16.06.2025

2. Threat and Risk Analysis

The project, to be sustainable, will require a user base that must be acquired through advertising. Once an initial user base is established, revenue from built-in ads must at least cover the cost of the server hosting the project. Both factors pose financial risks. Additionally, due to the online nature of the project, it is vulnerable

to external attacks, which necessitates staying up-to-date with current web services and security measures.

3. Context

Many websites reveal that the job search process can be very demanding. We plan to target users who struggle to find employment and are motivated to organize their recruitment-related data. We aim to achieve this by combining several smaller features—such as recruitment history, CV builder, and articles—into one cohesive hub that users can return to.
